The FastRack 1200 was introduced at the IBWA show in 2000. This model has proven itself as a space saving work horse for the mid-size bottler. Ideal for bottling line speeds of 900 to 1200 bottles per hour, this machine can pay for itself in less than 2 years.

ARE YOU STILL MANUALLY LOADING RACKS?

When you look at your bottling operation you see exactly who's doing the heavy lifting and where your worker's compensation dollars are going. The solution is to automate with the most cost effective rack loading system available. Operating at a cost of pennies per bottle, the FastRack 1200 and 800 actually produce more than they cost by removing the risk and direct cost of personnel that manually load the racks in your facility.

This space saving system does not require a "Perimeter Safety Cage" and does not require specialized operators.

The FastRack 1200 and the new FastRack 800 are equipped with only the highest quality parts. SMC pneumatics, Siemens controls and other high end components ensure longevity and smooth operation for years of service.

These machines have been proven in the field to operate consistently and efficiently for millions of cycles.

The FastRack 1200 and the new FastRack 800 rack loading systems each come with 12 feet of integrated power rack conveyor. They also come with a one year warranty on parts and workmanship.
